

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~striketrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

1. (currently amended) An E-mail system, comprising:
a receiving device receiving transmission information transmitted from a sender to a plurality of receivers;
an emphasizing device emphasizing and highlighting different parts of the transmission information for respective receivers, and preparing E-mail information including all of the transmission information with the transmission information in which the different parts are highlighted for respective receivers; and
a transmitting device transmitting the E-mail information including all of the transmission information to all respective receivers.

2. (original) The E-mail system according to claim 1, wherein the receiving device receives a part of the transmission information that the sender designates and information about a corresponding transmission destination, and the emphasizing device emphasizes and highlights the designated part and prepares E-mail information for a receiver corresponding to the transmission destination.

3. (original) The E-mail system according to claim 1, further comprising a storing device storing keyword information predetermined for each receiver, wherein
the emphasizing device emphasizes and highlights a part including the keyword information when the keyword information is included in the transmitted information, and prepares E-mail information for a receiver corresponding to the keyword information.

4. (currently amended) A terminal apparatus, comprising:
a transmitting device transmitting transmission information prepared for a plurality of receivers including all of the transmission information; and

an indication device indicating E-mail information that emphasizes and highlights different parts of the transmission information for respective receivers, with all of the transmission information sent to all respective receivers.

5. (currently amended) A computer-readable recording medium recording a program causing a computer to perform:

- receiving transmission information from a sender to a plurality of receivers;
- emphasizing and highlighting the different parts of transmission information for respective receivers;
- preparing E-mail information for respective receivers; and
- transmitting the E-mail information including all of the transmission information to all respective receivers.

6. (currently amended) An E-mail transmitting method, comprising:

- preparing transmission information to be transmitted from a sender to a plurality of receivers;
- emphasizing the transmission information for respective receivers;
- preparing E-mail information for respective receivers;
- transmitting the E-mail information including all of the transmission information to all respective receivers; and
- emphasizing and displaying the transmission information for respective receivers.

7. (currently amended) An E-mail system, comprising:

- receiving means for receiving transmission information transmitted from a sender to a plurality of receivers;
- emphasizing means for emphasizing the transmission information for respective receivers, and preparing E-mail information for respective receivers; and
- transmitting means for transmitting the E-mail information including all of the transmission information to all respective receivers.

8. (currently amended) A system for propagating a signal from a propagating computer to receiver computers, said propagating computer of said system comprising a program, said program causing the computer to perform:

receiving transmission information transmitted from a sender for a plurality of the receiver computers;

emphasizing and highlighting the different parts of transmission information for respective receiver computers and preparing E-mail information for respective receiver computers; and

transmitting the E-mail information including all of the transmission information to all respective receiver computers.

9. (currently amended) A method, comprising:

receiving information for different destinations with the information having different parts;

emphasizing the different parts responsive to the destinations;

sending all of the information by email to all the destinations with each destination receiving all of the information with at least one of the parts emphasized responsive to the destination; and

displaying the information with the one of the parts emphasized at least one of the destinations.
